SUMMARY

MBA candidate with a background in Mechanical Engineering and professional experience in IT services. Skilled in data analysis, stakeholder communication, quality assurance, and dashboard development. Experienced in working with clients, coordinating teams, and using analytical tools such as SQL, Excel, and Power BI to support business decisions. Interested in Business Analytics, Marketing Analytics, and data-driven problem solving.

EDUCATION

VNR VJIE 2020 – 2024
B. Tech, Mechanical Engineering

TAPMI 2026
MBA

SKILLS

- **Languages:** SQL, Python
- **Tools:** Excel, Power BI

EXPERIENCE

Assistant System Engineer Jun, 2024 – Aug, 2025
Tata Consultancy Services (TCS)

- Collaborated with international clients to understand requirements and deliver customized dental design solutions.
- Analyzed patient-specific requirements to develop customized dental design solutions while maintaining quality and turnaround targets.
- Coordinated with team members to manage workflow and ensure timely project completion.
- Maintained daily operational reports and productivity trackers using Excel.

PROJECTS

EV Adoption and Charging Infrastructure Analysis Dashboard

- Tools: Excel, Power BI, Data Visualization
- Developed interactive dashboards to analyze EV adoption trends across countries and Indian states.
- Compared EV penetration, charging infrastructure growth, and market maturity stages.
- Designed visual reports to identify regional adoption patterns and infrastructure gaps.

CERTIFICATIONS

Advanced Robotics, IIT Kanpur (NPTEL)
Business Analytics, Udemy

EXTRACURRICULAR ACTIVITIES

Reading novels and articles
Playing Cricket & Table Tennis

ACADEMIC RESEARCH & PUBLICATIONS

Evaluation of Ultimate Tensile Strength for Friction Stir Welding through Machine Learning 2024

- Applied Machine Learning techniques to predict Ultimate Tensile Strength (UTS) of friction stir welded joints.
- Analyzed relationships between welding parameters such as tool geometry, welding speed, and material properties.
- Developed predictive models to improve weld quality estimation and manufacturing process optimization.
- Combined Mechanical Engineering concepts with data-driven analytical methods.
- Demonstrated practical application of Machine Learning in industrial manufacturing environments.
